Purba Medinipur (Tamluk) Courts — Monthly Descriptive Analysis

Monthly cadence over 198 months (Jan 2010 – Jun 2026), with working-day-adjusted rates and trended time series

All measures are computed **monthly** on a fixed **198-month grid** (Jan 2010 – Jun 2026) for every case type, and the four courts are reported separately in the order CJM, DJ, CJ (Sr.), CJ (Jr.).

Month indexing & data window. Counting back from the present, **Month 1 is the most recent month — June 2026 — and Month 198 is the earliest, January 2010**; the time-series plots use calendar time (left = Jan 2010, right = Jun 2026). Data were extracted on **20 July 2026** (the latest record in the databases); the analysis is capped at **June 2026, the last complete month**, so partial July 2026 records are excluded. Every time series carries a 12-month moving average (navy) and a fitted linear trend (red dashed).

Working-day calendar. A working day is a rule-allowed day (Mon–Sat, excluding Sundays and the 2nd & 4th Saturdays) on which the court had genuine activity — a case filed, registered, disposed, or a hearing held. Rates are expressed per working day; durations (gap, disposal) are counted in working days.

Date reliability (brief). Filing and decision dates are genuine, so arrival, the hearing rate and disposal use the full 2010-onward window. The first-listing date is unreliable for bulk-digitized old cases, so the gap and hearing-count measures use each court's listing-reliable cut-off — **CJM 2017-01-01, DJ / CJ (Sr.) / CJ (Jr.) 2015-01-01**. (The digitization mechanism was covered in the earlier report and is not repeated here.)

Definitions — the random variable behind each measure and plot

Every table and every plot names its random variable; this page is the reference.

Measure	Random variable	Definition
Arrival — monthly count	$A(m)$	number of cases of the type filed in calendar month m (198-month grid)
Arrival — daily rate	$A(m) / W(m)$	filings in month m divided by working days $W(m)$; case types with > 500 filings
Working days	$W(m)$	number of rule-allowed days in month m with genuine court activity
Filing->first-listing gap	G	court working days between filing and first listing (listing-unaffected cases)
Number of hearings	X	number of distinct hearing dates on a disposed, listing-unaffected case
Monthly (calendar) hearing rate	$H(m) = h(m) / W(m)$	hearings of the type **held in month** m divided by working days $W(m)$ — the court's throughput per working day
Case-wise hearing rate	X / e	hearings **on a case** divided by its elapsed time e (working days, or months) from filing to decision — how intensively that case is heard
Time to disposal	D	court working days between filing and decision (disposed cases filed 2010 onward)

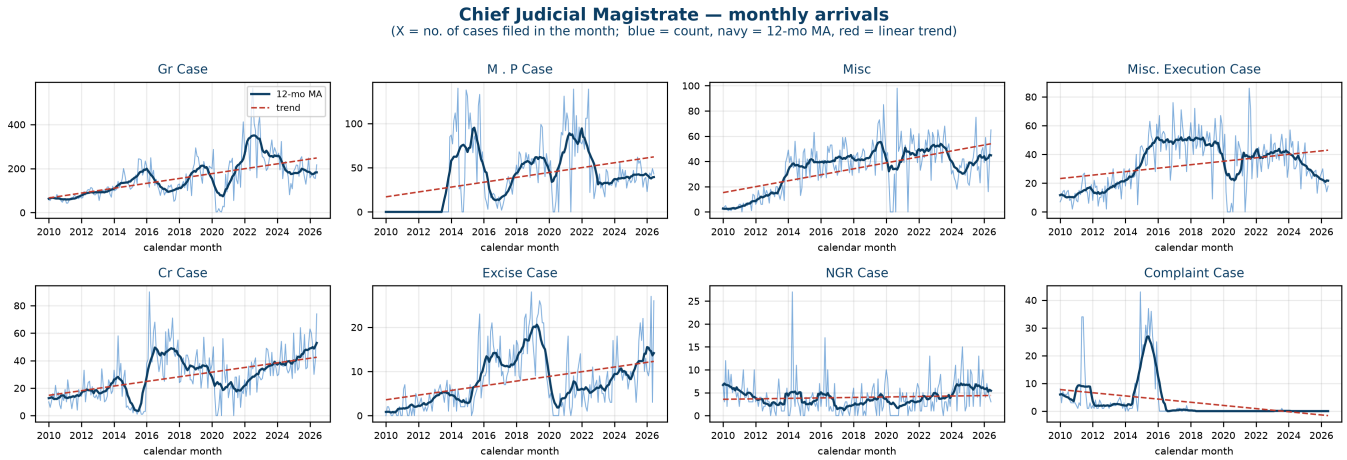

Note three distinct hearing views: X = hearings **per case** (a count); the **monthly rate** $H(m)$ = the court's hearing **throughput per working day** (a calendar time series); and the **case-wise rate** X/e = how intensively an **individual case** is heard (a per-case distribution). All three are reported.

1 * Monthly Arrival Rate

Per case type over the 198-month grid: filings, and the mean / median / maximum of the **monthly filing count** `A(m)`. The **daily rate** `A(m)/W(m)` (mean over months) is shown for case types with > 500 filings. Means use the full 198-month denominator.

1.1 Chief Judicial Magistrate — monthly arrivals by case type (X = no. of cases filed in the month)

4 * Rate of Hearings — two complementary views

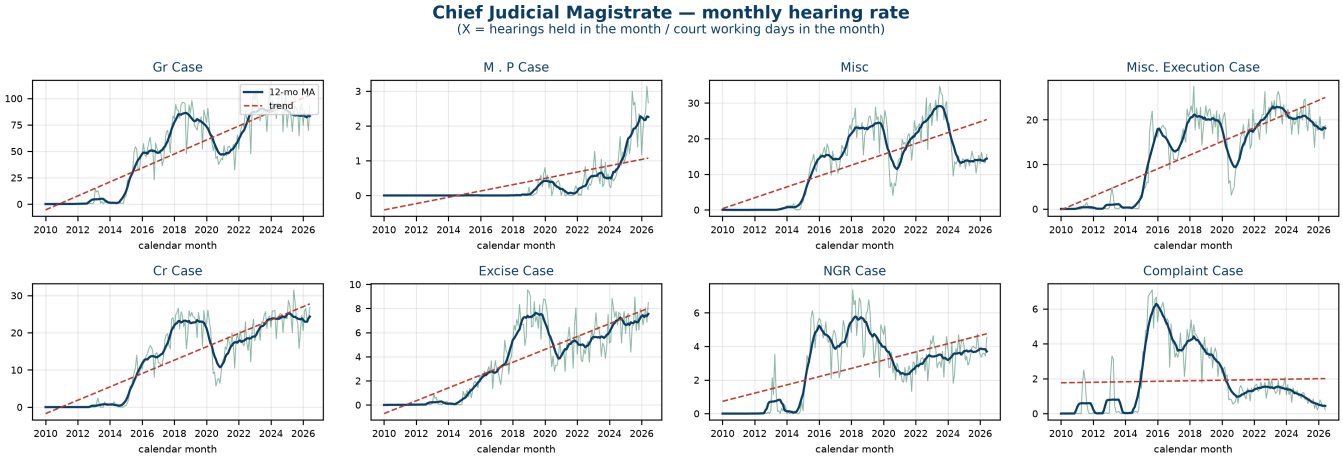

Two rates are reported. **(a) The monthly (calendar) rate** `H(m) = hearings held in month m / working days in month m` measures the court's hearing **throughput per working day** — a calendar time series. **(b) The case-wise rate** `= hearings on a case / elapsed time` measures how **intensively an individual case** is heard — a per-case distribution. §4a covers (a); §4b covers (b).

4a * Monthly (calendar) hearing rate

`H(m) = hearings held in the month / working days in the month`, summarised over the 198-month series (mean, median, 75th, 90th, 95th); time-series plots (12-month MA + linear trend) follow for case types with > 500 filings.

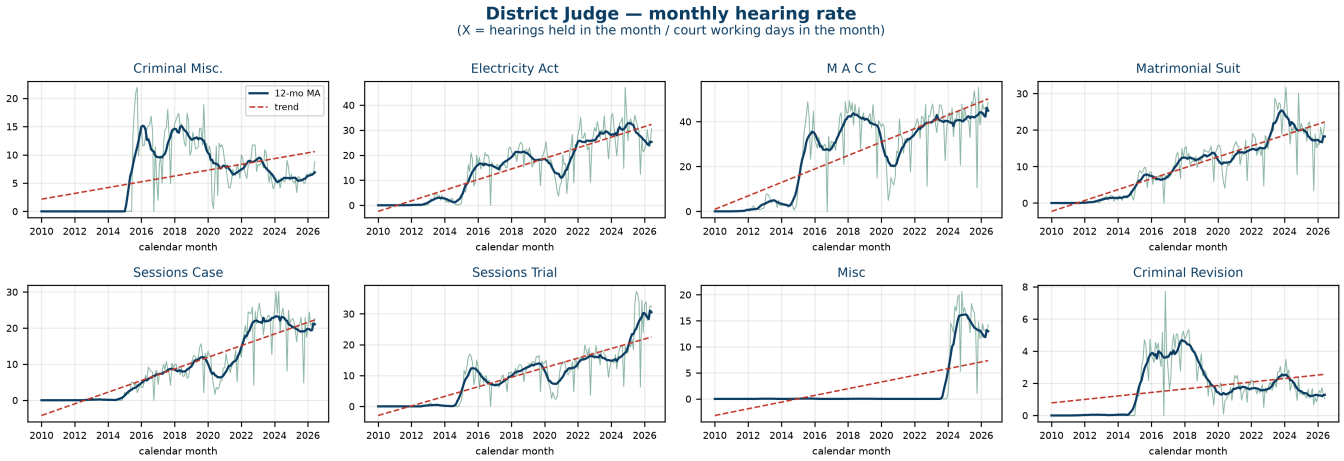

4a.1 Chief Judicial Magistrate (X = hearings held in the month / working days in the month)

4b * Case-wise rate of hearing

Per disposed, listing-unaffected case: hearings on the case ÷ **elapsed time in months** from filing to decision (cases resolved in under one day are excluded). The table gives N, mean, median, 75th, 90th and 95th percentile; the histogram is of the per-month rate (upper 1% clipped for scale). The equivalent per-working-day figures are also kept in the workbook.

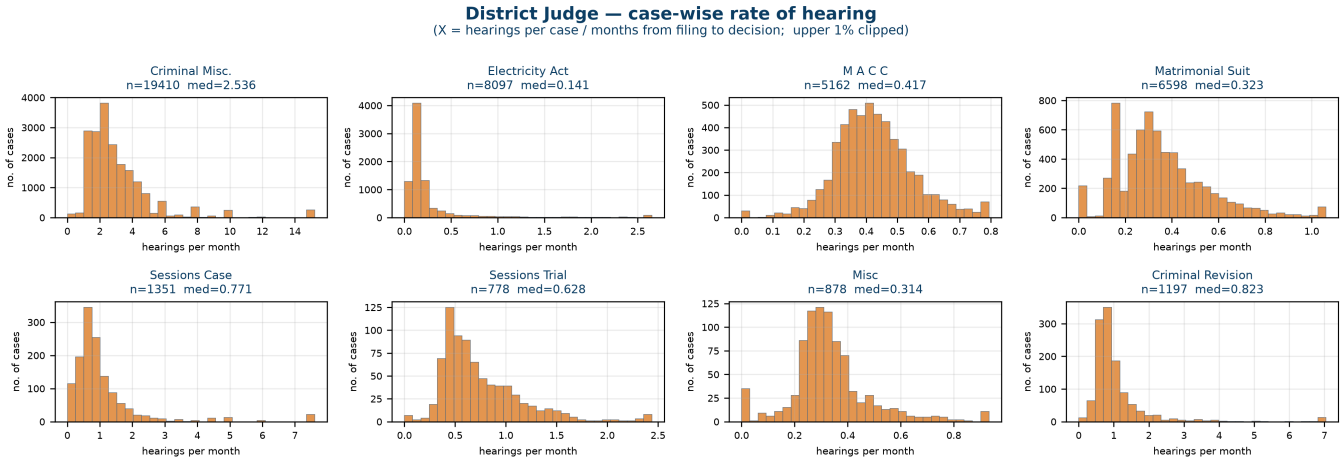

4b.1 Chief Judicial Magistrate (X = hearings per case / elapsed months)
